

Improving Key Outcome Measures

ACP Evidence-based Clinical Programs

In today's changing healthcare environment, providers face significant challenges including increasing demand to prove quality care and outcomes, increasing costs, and the continual need to attract new referrals. ACP's Evidence-based Clinical Programs have shown to reduce costs, improve treatment efficacy and effectiveness, and enhance the patient experience.

Outcomes Study by The Moran Company*

25,000+ Medicare Part A stays. 17-month period. Continuity Assessment/Resident Evaluation (CARE) Mobility and Self-Care Item Set completed upon admission and discharge, comparing patients treated with and without ACP Clinical Programs.

23% GREATER
functional improvement
in mobility outcomes
with ACP programming

11% GREATER
functional improvement
in self-care outcomes
with ACP programming
