

Improve Strength, Function, and Overall Fitness with ACP's Cardiopulmonary Program

Help Your Patients Live a Healthier Life

Diseases in both the heart and lungs often go together, and if a patient has chronic obstructive pulmonary disease (COPD) they're at a higher risk of having a heart attack or developing chronic heart disease. Heart failure and chronic obstructive pulmonary disease are global epidemics, each affecting more than 10 million patients worldwide*. Patients suffering from these diseases often experience shortness of breath, chest tightness, cough with mucus, and often feel rundown and tired. Unfortunately, many patients suffering from these diseases do not seek medical help because they don't know that safe and effective treatment exists.

ACP's cardiopulmonary program combines innovative rehabilitation technologies with customized clinical protocols and pathways, advanced therapist training and ongoing support by ACP's licensed physical and occupational therapists. This fully integrated and highly customizable approach incorporates therapeutic exercise to help improve muscle strength and aerobic capacity, combined with rehab technologies such as electrotherapy to help increase circulation and neuromuscular function which improves patient outcomes and quality of life.

ACP'S CARDIOPULMONARY PROGRAM WILL:

HELP YOUR PATIENTS:

- Build strength and endurance
- Increase circulation
- Improve aerobic capacity
- Enhance quality of life

SUPPORT YOUR CLINIC GOALS TO:

- Reduce costs
- Improve quality measures
- Educate and support staff
- Differentiate your clinical practice
- Strengthen census and referrals
- Lower hospital recidivism

Patients who received therapies with ACP Modality Program applications typically began at a lower functional level and achieved higher levels of functioning at discharge.

– ACP OUTCOMES STUDY BY THE MORAN COMPANY

* "Update in diagnosis and therapy of coexistent chronic obstructive pulmonary disease and chronic heart failure" *The Journal of Thoracic Disease*

“We have had excellent outcomes with our patients experiencing COPD, Strokes, Hip and TKR just to mention a few.”

– FRANCES FRAZIER, FACILITY REHAB DIRECTOR, ROYAL OAKS RESIDENCE & REHABILITATION

EVIDENCE-BASED CLINICAL PROGRAM – CARDIOPULMONARY

INNOVATIVE REHAB TECHNOLOGIES	CLINICAL SERVICES
<p>OmniVersa® Electrotherapy and ultrasound combination therapy system that includes integrated, evidence-based clinical protocols and offers ultrasound and a variety of electrical stimulation waveforms to effectively address and improve neuromuscular function.</p>	<p>Education & Training CEU-approved courses provide clinicians with the most current in-depth information on comprehensive assessment and treatment interventions for cardiopulmonary diseases.</p>
<p>OmniCycle® Therapeutic exercise system with motor-assist technology and biofeedback driven exercise programs to accommodate lower functioning patients with strength, coordination, orthopedic, neurologic or cardiopulmonary challenges.</p>	<p>Treatment Pathways & Protocols Clinical protocols designed to guide clinicians to implement skilled, evidence-based rehabilitation programs for patients dealing with cardiopulmonary diseases.</p>
<p>OmniVR® Virtual reality system designed to improve exercise participation, repetition, balance and cognitive function by re-creating the patient’s movements in a 3-D, real-time interactive experience. When immersed in virtual reality, the patient demonstrates greater motivation, exercise intensity and repetitions. Integrated CARE item set.</p>	<p>Caseload Consultation Ongoing assessment of clinical needs and development of customized intervention strategies to improve patient and facility performance in important quality measures.</p>
	<p>Clinic Differentiation Tailored marketing programs to help you highlight your superior practices and results to differentiate your clinic and improve census.</p>
