

OmniVR®

Engaging, Immersive Virtual Reality Therapy System

A virtual reality therapy system, the OmniVR® enables functional rehabilitation for aging adults and others with physical limitations. This easy-to-use system incorporates an advanced 3D camera and specialized computer to capture your patient's movements and allows them to interact in a virtual world. OmniVR helps to address patient's cognitive impairment by incorporating activities that utilize memory and executive function. Virtual reality helps make therapy more fun and engaging for your patients and motivates them to exercise harder and longer while improving their functional outcomes.

OmniVR helps you treat your patients more effectively and efficiently:

- Perform group and concurrent therapy with a system that is easy for both you and your patients to use
- Recreate the patient's movements in a "real-time" interactive experience with the innovative 3D camera
- Improve functional abilities through muscle strengthening, balance, movement, coordination, endurance and cognitive exercises
- Leverage different skilled exercise modes for lower-functioning patients, including:
 - Seated exercise
 - Balance
 - Wheelchair propulsion and control
 - Walking
 - Upper extremity
 - Cardio

UNIQUE FEATURES:

- Microsoft® Kinect® Camera
- Computer Unit Included
- Embedded Videos
- CARE Tool Set Navigation

“We use ACP equipment daily and are thrilled with their technology. We enjoy all of the new items they are continuously providing as well, along with the education that keeps us up to date.”

– STEPHANIE DICK, FACILITY REHAB DIRECTOR, SOMERWOODS NURSING & REHAB CENTER

ACP’s Evidence-Based Clinical Programs

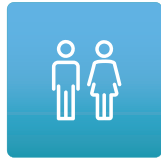

Our customizable evidence-based programs combine innovative technologies like the OmniVR with customized clinical protocols and pathways, advanced therapist training and on-going support by ACP’s physical and occupational therapists to ensure you achieve better outcomes for your patients in the most efficient manner.
