

Accelerate Wound Healing with ACP's Wound Management Program

Help Your Patients Heal Faster and Improve Their Quality of Life

Slow healing wounds may occur as an unfortunate consequence of critical illness and long-term disability in a variety of health care settings. Approximately 11% of nursing home residents have pressure ulcers and 35% of nursing home residents incur wounds due to pressure ulcers, diabetes, poor circulation, or swollen legs*. Wounds are a leading cause of extended hospitalization, delayed rehabilitation and hospital readmission for pain, infection and amputation. For some individuals, it is not unusual for a slow healing wound to persist for many months and sometimes even years.

ACP's wound management program combines innovative rehabilitation technologies with customized clinical protocols and pathways, advanced therapist training and ongoing support by ACP's licensed physical and occupational therapists. This fully integrated and highly customizable approach incorporates rehab technologies such as electrotherapy, ultrasound and diathermy to help accelerate wound healing and increase circulation while improving patient outcomes.

ACP'S WOUND MANAGEMENT PROGRAM WILL:

HELP YOUR PATIENTS:

- Be free of the burden of slow-healing wounds
- Reduce pain and swelling
- Increase circulation
- Improve range of motion
- Enhance quality of life

SUPPORT YOUR CLINIC GOALS TO:

- Reduce costs
- Improve quality measures
- Educate and support staff
- Differentiate your clinical practice
- Strengthen census and referrals

On average, ACP customers have 24% better scores on short-stay pressure ulcer measures compared to non-ACP customers.

– 2017 THE MORAN COMPANY FIVE-STAR RATINGS STUDY

* "Pressure ulcers among nursing home residents" *National Center for Health Statistics*

“Both the training and equipment provided by ACP have been exceptional. Our residents have benefited greatly from their programs, including pain, falls, and wound management to name a few.”

– ROBYN HARVELL, REGIONAL MANAGER, WAYNE COUNTY NURSING HOME

EVIDENCE-BASED CLINICAL PROGRAM – WOUND MANAGEMENT

INNOVATIVE REHAB TECHNOLOGIES	CLINICAL SERVICES
<p>OmniVersa® Electrotherapy and ultrasound combination therapy system that includes integrated, evidence-based clinical protocols and offers ultrasound and a variety of electrical stimulation waveforms to effectively increase local circulation and promote tissue healing.</p>	<p>Education & Training CEU-approved courses provide clinicians with the most current in-depth information on comprehensive assessment and treatment interventions for wound management.</p>
<p>OmniSWD® Shortwave diathermy system with integrated indication navigation helps increase circulation and reduce pain and inflammation, decrease joint stiffness, relieve muscle spasms and increase local blood flow. Applied to the patient through a large applicator, shortwave diathermy may be used to assist in the treatment of soft tissue injuries, slow healing wounds and joint contracture.</p>	<p>Treatment Pathways & Protocols Clinical protocols designed to guide clinicians to implement skilled, evidence-based rehabilitation programs for patients dealing with chronic wounds.</p>
<p>OmniCycle® Therapeutic exercise system with motor-assist technology and biofeedback driven exercise programs to accommodate lower functioning patients with strength, coordination, orthopedic, neurologic or cardiopulmonary challenges.</p>	<p>Caseload Consultation Ongoing assessment of clinical needs and development of customized intervention strategies to improve patient and facility performance in important quality measures.</p>
	<p>Clinic Differentiation Tailored marketing programs to help you highlight your superior practices and results to differentiate your clinic and improve census.</p>
