

OmniTour™

Virtual Exercise Experience

Boosting Engagement, Outcomes, and Care Delivery

Accelerated Care Plus (ACP) implemented the all-new **OmniTour™ Virtual Exercise Experience** in skilled nursing facilities to help clinical teams boost patient engagement and outcomes while optimizing care delivery through immersive virtual cycling.

Virtual outdoor landscapes motivate patients to train more often and with greater effort, enhancing therapeutic results.

By seamlessly connecting with multiple OmniCycle® Connect devices, OmniTour enables group therapy options that improve care efficiency and encourage socialization.

OmniTour™ Implementation Results

Inpatient/Outpatient

ACP introduced the **OmniTour™** and **OmniCycle® Connect** to a skilled nursing facility providing inpatient/outpatient rehabilitation services in November 2023.

This facility primarily serves Medicare Part B patients. Before using OmniTour, they struggled to meet 20% group/concurrent therapy for their Managed Part A patients. They utilized OmniTour and OmniCycle Connect daily for concurrent therapy and with skilled Medicare Part B patients.

KEY FINDINGS

Labor Costs & Time Savings

OmniTour enabled this facility to deliver more concurrent and group therapy, saving time and providing more room in their therapists' schedules to see more patients without increasing labor costs.

Reduced labor cost by an estimated **8-12%**

For Medicare Part A patients, the percentage of **concurrent/group treatment increased by approximately 24%** year-over-year

Clinicians saved an average of 75 minutes per day on documentation or through group/concurrent therapy and **increased average staff productivity by approximately 1.3%** year-over-year

For patients with Medicare Advantage (MA) plans, the percentage of **concurrent/group treatments increased by approximately 14%** year-over-year, **maintaining > 20%** concurrent group

Clinician & Patient Ratings

This facility found that using OmniTour for group therapy was efficient for staff and engaging for patients. When surveyed, 91% of patients enjoyed therapy sessions with OmniTour and preferred cycling with OmniTour over cycling alone.

"OmniTour offers opportunities to increase engagement among our patients, helps improve patients' cardiorespiratory function, and assists staff with productivity and efficiency."

— DIRECTOR OF REHAB

Short-Term Rehabilitation Facility

ACP introduced the **OmniTour™** and **OmniCycle® Connect** to a short-term rehabilitation facility in December 2023. This facility primarily serves Medicare Part A patients. OmniTour helped this facility expand its group therapy capabilities, enabling it to increase its volume of Medicare Part A patients year over year.

REAL PATIENT FEEDBACK

“The tours make me feel like I’m not stuck here.”

“I enjoy doing it! The different places I can go – fun!”

KEY FINDINGS

Labor Costs & Time Savings

Achieved
90% productivity

On average, clinicians **saved an estimated 49 minutes per day** on documentation or through group/concurrent therapy

Increased Medicare Part A patient census by **approximately 22%** year-over-year

Clinician & Patient Ratings

Clinicians at this facility found OmniTour to be an effective tool to help distract patients from pain during their therapy sessions, as well as mitigate some behaviors associated with dementia. They noted higher patient engagement, which resulted in strength and endurance gains.

“It has allowed patients to engage more and give more effort when on the OmniCycle. Patients have been more motivated to socialize, discussing the different tours while riding together. It also helps keep patients with dementia or cognitive decline attentive to their task.”
